RBE201TC

Computer Aided Design and Simulation with Sustainability Mindset in Robotics

Individual Report

Your Report Title

[Full name – Student ID]

School of Robotics, Xi'an Jiaotong-Liverpool University
Module Leader: Dr. Zhouyan Qiu
Submission date: [YYYY-MM-DD]

Table of Contents

1 Text and headings 2
1.1 Subsection heading 2
2 Tables 2
3 Figures 3
4 Equations 4
5 Citations 4
AI Declaration 5
References 6
A Supporting material 7

1 Text and headings

This paragraph demonstrates the normal body text. Replace the example text with your own content.

1.1 Subsection heading

[Body text.]

1.1.1 Third-level heading

[Body text.]

2 Tables

Table 1 demonstrates a caption above the table and horizontal rules without vertical lines.

Table 1. Example table caption

Column 1	Column 2	Column 3
Item 1	–	–
Item 2	–	–

3 Figures

A single figure is shown first, followed by composite figures with shared captions. Replace each subfigure caption with a short description; labels (a), (b), and so on are generated automatically. For example, Figure 2(a) refers to the first panel.

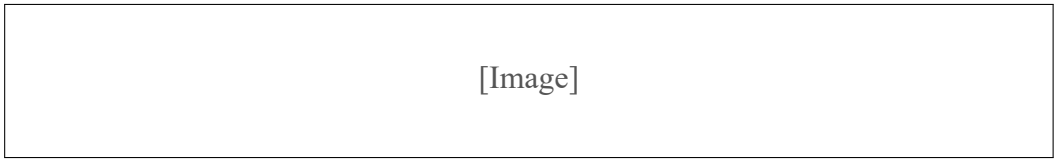

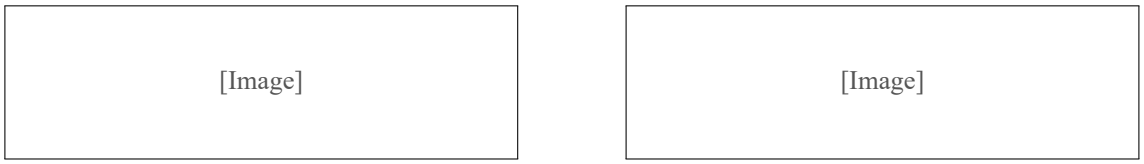

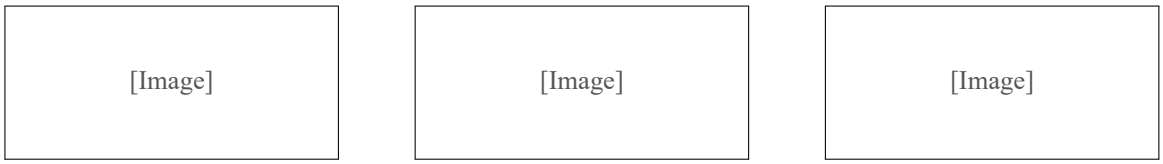

Figure 1. Single figure with a caption below.

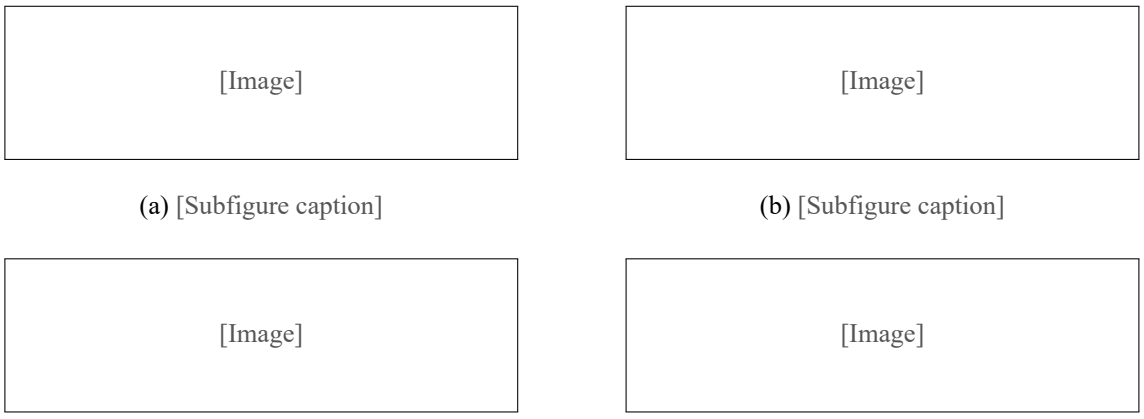

(a) [Subfigure caption] (b) [Subfigure caption]

Figure 2. Two subfigures arranged side by side.

(a) [Subfigure caption] (b) [Subfigure caption] (c) [Subfigure caption]

Figure 3. Three subfigures arranged in one row.

(a) [Subfigure caption] (b) [Subfigure caption]

(c) [Subfigure caption] (d) [Subfigure caption]

Figure 4. Four subfigures arranged in a two-by-two grid.

4 Equations

A single numbered equation is shown below. Use equation cross-references such as Equation (1); the number updates automatically.

$$\bar{x} = \frac{1}{n} \sum_{i=1}^{n} x_i. \tag{1}$$

The following aligned calculation has one equation number for the entire block:

$$\begin{aligned} f(x) &= (x+1)^2 \\ &= x^2 + 2x + 1. \end{aligned} \tag{2}$$

Equation (2) demonstrates alignment at the equals signs.

Use the align environment when each line needs its own number:

$$a = b + c, \tag{3}$$

$$d = e + f, \tag{4}$$

$$g = h + i. \tag{5}$$

The lines can be cited separately: Equations (3), (4) and (5).

5 Citations

The examples below use IEEE-style numbered citations, with each number in square brackets and consecutive references compressed into a range:

- Single reference: [1].
- Multi references: [2]–[4], [6].

The six bibliography entries are format placeholders, not real sources. Replace them with genuine references. Citation numbers follow the order of first citation.

AI Declaration

Select ONE of the following two declarations and delete the other. Delete this instruction before submission.

If generative AI was used:

During the preparation of this work, the author used [TOOL NAME] for [PURPOSE AND AFFECTED ARTEFACTS OR SECTIONS]. The author reviewed and edited the outputs, verified the technical content and sources, and takes full responsibility for the submitted work.

Field	Declaration details
Tool	[Tool name; version if known]
Purpose	[What assistance was used for]
Affected material	[Sections, figures, files or other artefacts]

If no generative AI was used:

No substantive generative AI or AI-assisted content generation was used in preparing this work.

References

[1] Example Author 1, “Reference 1: format example only,” 2026, placeholder entry; replace before submission.

[2] Example Author 2, “Reference 2: format example only,” 2026, placeholder entry; replace before submission.

[3] Example Author 3, “Reference 3: format example only,” 2026, placeholder entry; replace before submission.

[4] Example Author 4, “Reference 4: format example only,” 2026, placeholder entry; replace before submission.

[5] Example Author 5, “Reference 5: format example only,” 2026, placeholder entry; replace before submission.

[6] Example Author 6, “Reference 6: format example only,” 2026, placeholder entry; replace before submission.

A Supporting material

[Appendix text.]
